Personal Statement

G. Calo' has a large experience in research with a broad background in the pharmacology of peptidergic systems. Since 1990 G. Calo' has published more than 240 papers (number of citations 6500, H number 43) focused on peptide receptor pharmacology in particular in the fields of kinins, tachykinins, endothelins, opioids, nociceptin/orphanin FQ, urotensin II and, more recently, neuropeptide S. Several of these papers, particularly in the field of nociceptin/orphanin FQ and neuropeptide S, have been highly quoted placing them in the top 1% within their field: according to essential science indicators this demonstrated that the work summarized in those papers was highly influential and made a significant impact among scientists working in the field. G. Calo' is also author of several patents on original ligands for GPCR and novel therapeutic indications for such ligands. Since 1999 G. Calo' received research grants from different institutions at local, national, european, and international levels, and performed a large number of projects in collaboration with pharma industries.

Technology transfer and patents

During the period 1995-2000 G. Calo' contributed, as D Regoli collaborator, to the development of several industrial research projects in collaborations with the following companies: Italfarmaco (1994/95) novel antagonists of Y1 and B1 receptors, Hoest (1996) novel KATP blockers, Menarini (1997/98) B2 receptor antagonists, Schering-plough (1999/2000) NOP receptor agonists, Aventis (2000)UT receptor ligands.

Since 2001, G. Calo' acted as PI of the following industrial collaborations: Zealand Pharma (2001) pharmacological characterization of ZP120, GSK (2006) central effects of U-II, Allergan (2007-09) peripheral actions of NOP ligands, Helsinn (2009) pharmacological characterization of Netupitant, Allergan (2010/11) studies on retargeted toxins. Helsinn (2012-13) pharmacological characterization of proNetupitant. Allergan (2014/15) studies on AGN-001. Chiesi (2016) studies on PWT-N/OFQ. Grunenthal (2016) in vitro studies on GRT compounds. Chiesi (2017) DMR studies on lung cells.

In December 2002 together with medicinal chemistry colleagues G Calo' submitted a project to the Spinner organization (FSE funds) for the feasibility study of an academic spinoff. This project has been funded and in June 2003 the University of Ferrara spinoff company UFPeptides s.r.l. was constituted with G. Calo acting as Chairman. UFPeptides provides products and services to pharma companies. UFPeptides activities are focused to the identification and development of molecules interacting with G-protein coupled receptors; these proteins regulate several important biological functions and are implicated in a large variety of human diseases. UFPeptides collaborated with pharma companies for the development of research projects (2004-09), performed a proprietary research project partially funded by a PRRIIT grant (FSE funds, 2006-07), and made an agreement for the preclinical development of the agonopin (NOP agonists for urinary incontinence) project (2006). For this project an exclusive option license agreement has been signed by UFPeptides and Recordati in 2009 and a license agreement in 2011. The Phase I study of the agonopin project started in May 2014. Moreover, in 2015 an exclusive option license agreement has been signed by UFPeptides and Chiesi for the development of innovative antitussive drugs based on the PWT technology.
